OBJECTIVE

Driven and passionate Computer Engineering student skilled in both software development, hardware prototyping, and troubleshooting. Experienced in troubleshooting hardware components, designing circuits with Multisim, and developing microcontroller projects with Arduino.

EDUCATION

Cagayan State University – Carig Campus
Bachelor of Science in Computer Engineering *Expected 2027*

PROJECTS

Custom Regulated Power Supply
Designed and assembled a custom regulated power supply circuit designed to deliver stable voltage outputs for microcontrollers, sensors, and electronic testing benches.

Custom PIC Development Board
Engineered a custom PIC microcontroller development board equipped with peripheral interfacing, power management, and breakout header pins for embedded C/C++ prototyping.

Gas Sensor
A multi-gas detection module integrated with analog signal conditioning, adjustable threshold triggers, and microcontroller interfacing for real-time environmental monitoring.

Computer Engineering Alumni Job Portal
A centralized web platform built to connect alumni with career opportunities, featuring skill profiling and employer connections. Contributed to UI/UX and research documentation.

Eco-Charge
An energy-efficient alternative charging station prototype converting recycled plastic deposits into device charging power. Assisted in hardware assembly and research formulation.

HydroCast IA
An ESP32 & LoRa-based early warning flood risk mapping and telemetry system integrated with the Open-Meteo API for real-time flood monitoring and weather forecasting.

TECHNICAL SKILLS

Programing: Python (Pandas, NumPy – basic), C++ (academic background)
Circuit Design and Troubleshooting

SEMINARS

Talaktech Sereis: Pagtalakay sa Makabagong Teknolohiya (September 20 - December 8, 2025)
Frontiers of Computer Engineering: 2025 International Conference on New and Emerging Technologies (Dec 12–13, 2025)
ENVISION, CONSTRUCTED, EMPOWER (May 8, 2026)
Safe Spaces Act Symposium: (September 18, 2026)
